

# Buckets

\* Tooth Bar Available For All Buckets

Loflin Fabrication offers three basic styles of buckets that can be used in multiple applications. All of our buckets offer unique design features. Each bucket features strong, durable construction. These attachments are constructed of industrial strength 3/16" plate steel and feature 3/4" x 6" cutting edges. Cutting edges aren't wrap around. Instead, our corners are welded together to ensure longer wear. This design provides added durability. All of our buckets come standard with Safety Treads to prevent accidents while maneuvering in and out of the machine. The steps give your feet a solid foundation to support your weight and the texture prevents slipping in wet or muddy weather.

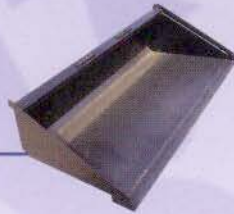

## Snow and Litter

You can use the Snow and Litter bucket for a variety of light materials, such as grain, seed and mulch. This attachment is designed to be large and lightweight so the customer can get the maximum use of the lifting capacity of the machine. It's made of 9-gauge plate steel and its built up sides minimize spillage. In other words, the material stays in the bucket. It has the largest loading capacity of all Loflin Fabrication buckets and the high back is ideal for pushing snow.

## 4-N-1 Bucket

This versatile attachment allows the user to perform a wide variety of tasks. The 4-N-1 bucket is ideal for dumping, loading, digging, leveling, grappling, and dozing. Its constructed of heavy duty cutting edge (1/2" x 6") and offers a reinforced floor of 1/4" extra strength steel. This attachment is available in five sizes. 60"-66"-72"-78"-84"

## Low Profile Long Bottom

This is the Loflin Fabrication bucket with the greatest visibility of the cutting edge. Especially ideal for use with machines where the customer is sitting lower, such as the John Deere and the New Holland skid steers. It measures 38" from front to back along the bottom. It serves as an excellent tool for grading and leveling. Its form also makes it a great attachment to use when **spreading fertilizer or other landscaping materials, such as crushed rock.**

## Low Profile

Other names for this attachment may include utility bucket or dirt bucket. Besides the fact that it is the strongest Loflin Fabrication bucket, it offers excellent visibility of the cutting edge. The compact form of the bucket produces powerful break out force. Add a tooth bar and use it for tough digging. It is ideal for construction and excavating, **as well as material handling.**

With the new Front Dump Bucket, you will have the ability to load materials like never before. This attachment will change the way you load dump trucks, spreaders, and tandem dumps. You will gain an average of 5 feet additional height and 3 feet of reach to the average skid steer. Discover how easy it is to load twice the material in half of the time. Available in two different styles: Snow & Litter and Dirt Bucket. Widths range from 72" & 84". Snow and Litter also available in 96" width.
